

FITOFORCE

CLARIFYING AND STABILIZING AGENT FOR MUST FERMENTATION

DESCRIPTION

FITOFORCE is a special powdered formulation based on bentonite, vegetable protein, and cellulose with clarifying and stabilizing action.

TECHNICAL APPLICATIONS

FITOFORCE, when used on fermenting musts, provides protein stabilization and removes polyphenols responsible for instability. Thanks to the combination of organic and inorganic elements,

FITOFORCE is also a valuable aid for alcoholic fermentation because it allows the separation of coarse lees, ensuring greater sensory cleanliness as well as fresher aromas. This special formulation is also effective for clarifying musts in pre-fermentation stages and where support for vacuum filtration is desired

DOSES AND METHOD OF USE

Dissolve directly in a part of water at a 1:10 ratio, let it rest, and add to the mass, continuing to mix.

The following dosages are recommended:

- 20-50 g/hL for white musts in pre-fermentation stages
- 30-80 g/hL for fermenting musts

PACKAGING STORAGE

Bags of 1 and 20 kg

Store in a cool, dry place.
